MECHANICAL ELECTRICAL

CPR TRAINING

On June 27th, between 7 am and 11 am, Midstate Mechanical & Electrical employees received CPR training in the large group room at 121 West Church Street, Dillsburg.

The pictures above show Dave Bushey and Jesse Feaser practicing proper CPR techniques.

The pictures featured were taken by Mike Stewart.

HOMEWOOD BALCONY REPAIRS

Unfortunately, a fire devastated this apartment balcony, including its EIFS (exterior insulation and finish system), decking, railing, framing, and some structural members. Additionally, smoke from the fire caused minor damages inside of the apartment.

To begin repairs, eciService removed all damaged materials on the exterior of the building. eciService then reinforced the damaged structural members, and installed new EIFS, decking, railing, and framing. The three panel door leading out to the balcony was replaced as well, due to heavy soot damage from the fire. eciService also performed minor drywall repairs to the interior of the apartment.

FORT INDIAN TOWN GAP: POLICE STATION

eciConstruction is building a new police station for Fort Indiantown Gap. The station will be located on Fisher Avenue just east of Wiley Road, where an EC-130 static display previously stood. The EC-130 moved a short distance down Fisher Avenue in September 2020 to make way for the station.

The 5,990-square-foot facility, expected to be completed by November 2022, will include a dispatch area, training areas, a holding cell, an evidence room, locker rooms, and office space.

The new station will utilize renewable energy, including a ground source heat pump HVAC and an approximate 15kw Solar Photovoltaic system. The building will be close to net-zero carbon emissions.

Brandon Weigle is the superintendent of this project, and Brian Imler is the project manager.

eciConstruction

SHREWSBURY MUNICIPAL CENTER

This project will become the new municipal center and maintenance garage for Shrewsbury Township. The office area will be 8,500 square feet, and the maintenance shop will be 9,000 square feet.

The project started in September of 2021 and is scheduled for completion in November of 2022. The administration area will include admin offices, meeting rooms, and maintenance offices. The maintenance area of the project will include a vehicle lift, wash bay and mechanical workspace for the maintenance staff. The main administration area will also feature exposed glulams with tongue and groove decking, and the maintenance shop will be a pre-engineered metal building.
